1.0 Company Background

The Cooperative of Lembaga Kemajuan Pertanian Kemubu (KADA) is part of a government agency in Malaysia which specifically established to drive agricultural development in the state of Kelantan. As part of its mission, KADA focuses on enhancing the productivity and economic well-being of farmers by providing various agricultural support programs, financial assistance, and infrastructure improvements.

One of KADA's key initiatives is the cooperative membership program, which allows its workers to become cooperative members and apply for loans to support their agricultural activities. However, the current system used to manage these services operates manually, leading to inefficiencies and reduced productivity. The manual processes involved in loan applications, membership registrations, and financial transactions create delays, increase administrative workload, and limit the overall effectiveness of the services provided.

Recognizing these challenges, KADA aims to modernize its system by transitioning to a more efficient and automated digital platform. This transformation will streamline operations, improve data accuracy, enhance user experience, and provide a more seamless approach to managing cooperative memberships and loan applications for its workers.

2.0 Problem Background

KADA (Lembaga Kemajuan Pertanian Kemubu) is an agricultural organization based in Kelantan. Employees under KADA are eligible to become cooperative members and apply for loans. However, the current system, or the as-is system, for providing these services is entirely manual, which results in low efficiency and productivity. The services currently provided to KADA staff include:

1. Registration for Cooperative Membership

Registration is a manual process requiring users to complete paper forms. Applicants must collect these forms in person at the headquarters, where they provide private and sensitive personal information. Once completed, the forms must be submitted in person for manual review by staff to determine eligibility for membership.

2. Loan Application Process

Similarly, applying for a loan involves manually filling out paper forms, which require additional details such as income information and guarantor data. After submission to the headquarters, these forms are reviewed by staff, and approvals are granted following a monthly meeting between staff and higher management.

Challenges with the Current Manual System

1. Loss of Information

Records are stored on paper, making them vulnerable to damage from water, fire, or mishandling. Misplacement or loss due to human error is also a significant risk, potentially leading to irreversible data loss.

2. Inefficient Data Access and Updates

Updating information requires locating specific physical documents, which is a time-consuming process. Clerks must search through files, locate the correct paper, and manually make changes, delaying task completion.

3. High Dependence on Human Effort

The manual handling, filing, and retrieval of documents demand considerable time and effort. This dependency on human labor reduces overall productivity and prevents employees from focusing on more strategic or valuable tasks.

4. Difficulty in Form Distribution and Submission

Applicants must travel to the headquarters to obtain and submit forms, incurring both time and transportation costs. This requirement creates inconvenience and discourages potential applicants.

5. Inadequate Data Security

Sensitive personal information is stored on physical documents with no security safeguards, making it susceptible to unauthorized access, duplication, or theft.

3.0 Proposed Solution

Proposed Online System

The proposed online system is designed to replace the manual processes and address the identified challenges. This solution aims to enhance efficiency, accuracy, and accessibility while ensuring data security. Key features of the system include:

- **Electronic Data Storage:** Records will be securely stored in a centralized database with encryption and backup systems, reducing the risk of data loss.
- **Streamlined Access and Management:** Authorized personnel can access and update records instantly, improving productivity and reducing task completion times.
- **Automation:** Automated processes minimize human dependency, accelerate application processing, and allow employees to focus on higher-value tasks.
- **Remote Application Submission:** Applicants can complete and submit forms online, eliminating the need for physical travel and providing immediate confirmation of submission.
- **Enhanced Data Security:** Sensitive information will be protected by robust security measures, preventing unauthorized access and ensuring data integrity.
- **Board Member Accessibility:** Members of the Board of Directors (ALK) will have remote access to applications, expediting reviews and approvals.

Benefits of the Proposed System

Replacing the manual system with the proposed online system offers significant advantages:

- **Improved Efficiency:** Digital processes eliminate delays caused by manual handling and streamline operations.
- **Greater Accuracy:** Automation reduces errors associated with manual data entry.
- **Increased Accessibility:** Applicants can interact with the system from any location, saving time and resources.
- **Enhanced Security:** Sensitive data is better protected through encryption and controlled access.
- **Higher Satisfaction:** Faster processing times and simplified procedures improve user experience and encourage broader participation in the cooperative.

The proposed online system presents a comprehensive solution to the limitations of the manual system and aligns with KADA's goals for operational growth and success.

4.0 Development Approach

Agile methodology is a flexible and iterative approach that emphasizes collaboration, customer satisfaction, and rapid delivery of valuable solutions. For this project, adopting Agile will allow the team to break work into smaller, manageable increments, enabling continuous feedback and adaptation throughout the development process. Regular sprint reviews will help ensure the project stays on track by matching the work to the project goals and what stakeholders want. By prioritizing collaboration across cross-functional teams and maintaining an iterative workflow, the project can respond quickly to changes, deliver high-quality outcomes, and maximize value to stakeholders. Agile's focus on incremental progress ensures that risks are minimized, and measurable results are achieved at every phase.

5.0 System Design (ERD, Use Case and Sequence Diagram)

5.1 Entities Relationship Diagram (ERD)

5.2 Use Case Diagram

The KADA Cooperative System is a flexible software solution that works with all devices, including Android and iOS platforms. It improves the management of member registrations and loan applications by addressing issues about data storage and accessibility. The system's real-time cloud database ensures simple access and an improved user experience.

Table 1.1: Description of Module and Functions for KADA cooperative system

Use Case ID	Name	Description
UC001	Manage Profile	Allows an applicant to edit personal information.
UC002	Applying Loan	Allows an applicant to make a loan application.
UC003	Check Loan Status	Allows an applicant to check the status of their loan (approved or declined).
UC004	Register	Allows members to register as members of the KADA Cooperative. it also cover on adding the Clerk and ALK Account
UC005	Login	Allows users (applicants, clerks, and ALK) to access their respective interfaces.
UC006	Logout	Allows all users to log out of the system.
UC007	Verify Loan Application	Enables ALK to view loan application details and decide whether to approve or decline.
UC008	View Annual Report	Enables ALK to view the annual report of the KADA Cooperative, including profit or loss data.
UC009	Create an Account	Enables the clerk to create an account for an applicant after verifying their staff status.
UC010	Manage List of Members	Enables the clerk to delete, update, or view personal information of members.
UC011	Manage Loan Application	Enables the clerk to filter and review loan applications but not make approval decisions.
UC012	Calculate loan repayment	Allow member to calculate their own loan repayment
UC013	Payment	Enables the clerk to oversee the payment of loans and savings.
UC014	Interest	Allow the clerk to update their interest based on the company requirement
UC015	Add Staff	Allow ALK to add more staff accounts so they can access the website.

5.3 Sequence Diagram

5.3.1 Module User

5.3.1.1 UC001: Use Case <Manage Profile>

5.3.1.2 UC004: Use Case <Register>

5.3.1.3 UC005: Use Case <Login>

5.3.1.4 UC006: Use Case <Logout>

5.3.2 Module Loan Application

5.3.2.1 UC002: Use Case <applying a loan>

5.3.2.2 UC003: Use Case <check loan status>

5.3.2.3 UC0012: Use Case <calculate loan repayment>

5.3.3 Module Clerk

5.3.3.1 UC009: Use Case <Create Account>

5.3.3.2 UC010: Use Case <manage list of member>

5.3.3.3 UC011: Use Case <manage loan application>

5.3.3.4 UC013: Use Case <payment>

5.3.3.5 UC014: Use Case <interest>

5.3.4 Module <ALK>

5.3.4.1 UC008: Use Case <verify loan application>

5.3.4.2 UC008: Use Case <report>

5.3.4.3 UC008: Use Case <add staff>

6.0 Development Software, Language, Technology, API and Tools

6.1 Software

During the development of the KADA Cooperative System, several software tools were utilized to streamline the project workflow and ensure an efficient development process. Visual Studio Code served as the primary source code editor, offering a feature-rich and extensible environment for writing and managing the system's code.

To facilitate local hosting and database management, Laragon was employed as the primary development environment. Laragon provides a lightweight and portable server solution with built-in support for Apache, MySQL, PHP, and other essential tools, ensuring a seamless local development experience.

For testing and validating system functionalities, Google Chrome was used as the primary web browser, providing a robust developer-friendly environment to debug and analyze performance, ensuring the system runs smoothly across different devices and screen sizes.

6.2 Language

The KADA Cooperative System incorporates multiple programming languages to ensure a fully functional and interactive platform.

- 1) Hypertext Markup Language (HTML) is used to structure the web pages.
- 2) Cascading Style Sheets (CSS) is employed to enhance the design, ensuring a responsive and visually appealing interface.
- 3) JavaScript (JS) is integrated to provide dynamic and interactive functionalities, improving user experience through event-driven actions and validations.
- 4) Bootstrap, a front-end framework, is used to maintain a consistent layout and responsive design.
- 5) Hypertext Preprocessor (PHP) is utilized for server-side scripting, handling form submissions, authentication, and database interactions.

- 6) Structured Query Language (SQL) is used for managing data within the MySQL database, ensuring efficient storage, retrieval, and manipulation of user and loan-related information.

The system follows the Model-View-Controller (MVC) architectural style to maintain modularity and scalability.

6.3 Tools

To design the system architecture and visualize database relationships, draw.io was used for creating the Entity-Relationship Diagram (ERD) and Use Case Diagram. This tool allowed for a clear and structured representation of system components and their interactions.

For documentation and report writing, Microsoft Word and Google Docs were utilized to collaboratively draft, review, and finalize system documentation. Additionally, phpMyAdmin, accessible through Laragon, was used for managing the MySQL database, allowing for easier administration and query execution.

These tools and technologies collectively ensure the efficient development, deployment, and maintenance of the KADA Cooperative System.

7.0 Function/Module Explanation

7.1 Module 1 <User>

Person in charge of this module is Syarifah Dania Binti Syed Abu Bakar

Module Description

This module focuses on managing user interactions within the cooperative system. It simplifies tasks like creating accounts, logging in, updating profiles, and securely logging out. By streamlining these operations, it ensures that members can access and manage their accounts with ease. The module includes four main functions:

7.1.1 UC001 <Manage Profile>

Allows members to view and update their personal details, ensuring their information stays current.

1. The user logs into the system.
2. The user navigates to the "Profile" section.
3. The system displays the user's current personal details.
4. The user selects the option to edit their profile.
5. The system enables the fields for editing.
6. The user updates the necessary details and submits the changes.
7. The system validates the updated information.
 - If the information is valid, the system saves the changes and updates the user's profile.
 - If the information is invalid or missing, the system displays an error message prompting the user to correct the details.

7.1.2 UC004 <Login>

Verifies user credentials and grants secure access to the system.

1. The user accesses the login page.
2. The system prompts the user to enter their username and password.

3. The user provides their credentials and submits the login request.
4. The system validates the credentials against the stored records.
 - If the credentials are correct, the system grants access and redirects the user to their dashboard.
 - If the credentials are incorrect, the system displays an error message and prompts the user to re-enter the credentials.

7.1.3 UC005 <Register>

Enables new members to create accounts, paving the way for their cooperative activities.

1. A new user accesses the registration page.
2. The system presents the registration form.
3. The user fills in the required details, such as name, email, phone number, and password.
4. The user submits the registration request.
5. The system validates the provided details.
 - If all details are correct and meet the validation criteria, the clerk creates a new user account.
 - If some details are missing or incorrect, the system prompts the user to make corrections.
6. The system sends an email
7. The system activates the user account and allows login.

7.1.4 UC006 <Logout>

Ends user sessions securely, safeguarding account information.

1. The user selects the "Logout" option from the navigation menu.
2. The system confirms the logout request.

3. The system terminates the user session and redirects them to the login page.
4. The system clears session data to prevent unauthorized access.

7.2 Module 2 <Loan Application>

The person in charge of this module is Yasmin Batrisyia Binti Zahiruddin

Module Description

This module focuses on the loan application process only. Start from members surveying first the loan repayment through loan calculator, then filling in the loan application form, and lastly check the loan status. This module include 3 use cases:

- UC002: Applying Loan
- UC003: Check loan status
- UC004: Calculate loan repayment

7.2.1 UC002 <Applying loan>

- Members who want to apply for a loan must be registered as a member of KADA in the system.
- Members could access the loan application form from the home page
- Members have to fill in all the requirements for the loan application.
- If the requirements are all correct, then it will be sent to the clerk, and ready for the approval phase from the ALK.

7.2.2 UC003 <Check loan status>

- After members have submitted the loan application form, they are able to check the loan status in their profile, whether it is successful, in progress, pending, or unsuccessful.

7.2.3 UC0012 <Calculate loan repayment>

- Members can get a rough view of how the repayment will be conducted later on.

7.3 Module 3 <Clerk>

The person in charge of this module is Muhammad Naim Bin Abdullah

Module Overview

This module focuses solely on the clerk's responsibilities within KADA. It encompasses three use cases:

- **UC009: Create an account**
- **UC010: Manage the list of members**
- **UC011: Manage loan applications**
- **UC013: Payment**
- **UC014: Interest**

Detailed Functionality:

1. UC009 <Creating a Member Account>

This module focuses on the process by which the clerk reviews, approves, or rejects member applications.

- In order to create an account, the user must be logged in as a Clerk.
- Click button “Permohonan Ahli”
- the clerk will check the list of the new register member
- the clerk will make sure the that the one who is register is from KADA
- the clerk will click the button ‘accept’ and it will lead to the create account page
- the clerk will create an account for them by using their email, staff id , name.
- the clerk will click the button ‘submit’ to indicate they are officially a member and it will notify and give a account username and password to the applicant by email

2. UC010 <Managing Member Information>

This module focuses on the clerk's responsibilities in managing member accounts within the KADA Cooperative System. It allows the clerk to review account details, delete accounts for members who wish to leave the cooperative, and edit saving payment records as needed.

- The clerk can monitor and update member information.
- If a member chooses to leave KADA or has retired, the clerk can click button “delete” to delete their information from the system.
- The clerk can update financial details that will be monthly deducted from the salary by click “edit” button

- After that the clerk will key in a new value based on the member
- After that click “submit” and it will be updated

3. UC011 <Managing Loan Applications>

This module focuses on loan management, allowing the clerk to review loan applications, delete records if necessary, and add remarks to facilitate the verification process for ALK.

- The clerk can review the details of loan applications.
- They are authorized to add remarks or comments explaining why a loan application should be approved or declined.
- The clerk can also view information about approved loan applications.
- If a loan application has been fully paid or requires deletion due to other circumstances, the clerk can delete it from the system.

4. UC013 <Payment>

This module focuses on enabling the clerk to update monthly payments, including both loan payments and savings contributions.

- clerk login to the cooperative system
- clerk check the payment for the user in the current month
- clerk update the payment status of the user

5. UC014 <Interest>

This module allows the clerk to adjust the interest rate based on the current economic conditions.

- clerk login the into the cooperative system
- clerk click the button ‘faedah’ to access the function
- clerk key in the new interest rate of the company
- clerk click “submit” to execute the process
- the rate of interest has been change

7.4 Module 4 <ALK>

7.4.1 < Verify Loan Application>

MUKHRITZ AL IMAN is the person in charge of documenting this module.

Module Description

This module will involve the actor ALK to verify the loan application submitted by the user to the KADA cooperative system.

1. In order to verify a loan application, the user must be logged in as an ALK.
2. After logging in, the ALK navigates to the "Loan Applications" section.
3. The ALK selects a specific loan application from the list.
4. The system displays the details of the selected loan application.
5. The ALK verifies the application details and decides to either approve or reject it.
6. Once the verification is complete, the system updates the loan application status to "Approved" or "Rejected".
7. If the application contains missing or invalid details, the system notifies the ALK, who can then directly reject the application.
8. The ALK must have the necessary access rights to view and verify loan applications.

7.4.2 < Report>

MUKHRITZ AL IMAN is the person in charge of documenting this module.

Module Description

This module involves the ALK that need to check on the monthly report of the KADA cooperative system to analyze the company information to make a strategic decision

1. In order to view the annual report, the ALK member must be logged into the system.
2. After logging in, the ALK member navigates to the "Reports" section.
3. The ALK member selects "Annual Report" from the list of available reports.
4. The system displays the annual report, which includes financial summaries, profit and loss data, and loan statistics.
5. The ALK member reviews the report for analysis.

6. If specific data is needed, the ALK member can filter the report by specific dates, loan types, or member categories.
7. Once the filters are applied, the system updates the report view accordingly.

7.4.3 < Add staff>

MUKHRITZ AL IMAN is the person in charge of documenting this module.

Module Description

This module involves ALK of KADA to add new staff whether it is ALK or the clerk for KADA cooperative system.

1. In order to add a new staff member, the ALK must be logged into the cooperative system.
2. After logging in, the ALK navigates to the "Add Staff" section.
3. The ALK inputs the new staff member's details, including their name, email, and password.
4. The ALK clicks submit.
5. The system adds the new staff member to the database, enabling them to log in.

10.4.2 Verify loan application

The screenshot shows the "Permohonan Pembiayaan" (Loan Application) verification page. It has the same green header bar as the dashboard. Below the header, the title "Permohonan Pembiayaan" is displayed. Underneath is a table with 8 columns: Nama, Email, Jenis Pinjaman, Jumlah Pinjaman, Tempoh Bayaran, Bayaran Bulanan, Remark, and Status Permohonan. There are two rows of data in the table. The first row is for SYARIFAH DANIA, and the second row is for NAIM DANIEL. Each row has "Approve" and "Reject" buttons in the "Status Permohonan" column. At the bottom left of the page, there is a button labeled "← Kembali".

Summary

Black-box testing is an ideal approach for higher-level testing phases, including system testing, acceptance testing, and usability testing. This method focuses on evaluating the software's functionality and overall behavior without analyzing its internal code. In system testing, it ensures that the system meets the required specifications by simulating real-world user interactions. During acceptance testing, it helps determine whether the software aligns with user expectations without requiring knowledge of its internal structure. For usability testing, which prioritizes user experience and interface design, black-box testing provides an objective assessment from an external user's perspective. This testing strategy is highly flexible and effective for comprehensive system evaluation, making it a valuable tool for validating performance and ensuring user satisfaction.

Beta Testing Report

Method Class

Entity	Member
Method name	manageProfile
Input	Member's information such as email, phone number, marital status, salary, home address, role and password.
Output	Updated member profile with the latest data.
Algorithm	1) Start 2) User clicks on the "Manage Profile" button. 3) System retrieves the user's existing profile data from the database. 4) The system automatically pre-fills all fields in the profile form.

	5) User updates any required information. 6) System validates the input fields. 7) If the input is valid, the user can click the “Update” button to submit the changes. 8) Else, the system displays an error message, highlighting incorrect or missing fields. 9) System saves the updated profile information in the database. 10) User is redirected to their profile page and sees the updated details. 11) End
--	--

Flow Graph

Cyclomatic Complexity

Formula 1: $V(G) = E - N + 2$

$$V(G) = 11 - 11 + 2 = 2$$

Formula 2: $V(G) = P + 1$

$$V(G) = 1 + 1 = 2$$

Formula 3: $V(G) = \text{No. of Regions of a Flow Graph}$ $V(G) = 2$

where E = edge, N = Node, P = connected component

Test cases

Case No.	Independent Path	Data for Test Cases	Expected result
TC001	1→2→3→4→6→7 →8→10→11→12	No existing student information, student fills up the form with correct format	Student information inserted into database
TC002	1→2→3→5→6→7 →8→10→11→12	Student information exists in the form, student updates details with correct format	Student information updated in database
TC003	1→2→3→4→6→7 →9→7(loop)→8→10→11→12 or 1→2→3→5→6→7 →9→7(loop)→8→10→11→12	Student fills up the form with incorrect format	Student is unable to submit the form unless they refill it with the correct input
TC004	1→2→3→5→6→7	Student edits profile	System successfully

	→8→10→11→12	but does not change any values	saves the profile without changes
